

DANIEL AMADO

Systems Engineer - Full Stack Developer

Phone: (+57) 314 431 6062 - Email: daniel.amadove@gmail.com - Country: Colombia 🇨🇴

ABOUT ME

I'm passionate about technology and always up-to-date with the latest trends. I love solving problems and finding creative solutions. I have 1 year of experience as an educator and 3 years in the IT and programming sectors, where I've been involved in all stages of web development. My true passion lies in frontend development, but I've also worked on backend and deployment. I'm always looking to automate processes through programming to optimize operations and improve productivity. Additionally, I leverage artificial intelligence wherever it's useful to enhance efficiency in key areas. I enjoy collaborating and continuously learning, taking on challenges that allow me to apply and expand my skills to boost efficiency and performance in every project I undertake.

PROFESSIONAL EXPERIENCE

Market Support Miami LLC

Developer and Communications Leader

2023 - PRESENT

- I developed interactive web pages for a globally renowned laboratory, including a medical calculator and a mandala painting app using SVG, among others, with technologies like Astro JS and React.
- I created and managed the web system for a company specializing in migration consultancy to the United States. During this time, I developed sales landing pages, an e-learning system, an e-commerce system, and integrated it with a CRM.
- I managed the official website of a world-renowned laboratory based in Colombia, leading a team of two WordPress experts.
- I developed an automated system for scheduling meetings and sending links to product managers in HTML format, using Google Script and Google Sheets.
- I developed a dashboard in Looker Studio to visualize the KPIs of conferences held by a world-renowned laboratory based in Colombia. This report is used by our client to make decisions related to webinars.
- I completely revamped two websites for the organization using the WordPress CMS, with the goal of streamlining site creation and making it easier for non-technical staff to manage (market-support.com, yourpartner-yourbusiness.com).
- I developed two products for a world-renowned laboratory based in Colombia: one is a web app for medical representatives to interact with various clinical cases, and the other is a web game where doctors can complete their album of patients and treatments.
- I trained the organization's staff and new hires in the use of tools utilized for broadcasts.

- I developed the corporate email signatures for the organization using HTML and table-based layout.
- I developed a cost-free email tracking system to determine which of our clients were reading our marketing emails, using Google Apps Script and Google Sheets.
- I am part of the innovation team, contributing ideas for new products that enhance the organization's portfolio. I have also improved one of our top-selling products, the interactive flipbooks.
- I am responsible for developing new features for the organization's internal project management system (Made in Casa).
- I lead a team of sound and systems technicians to support Abbott Laboratories in broadcasting their health conferences both nationally and internationally.
- I am leading the development of a web app that generates static HTML sites similar to Netflix, which will be a new product for the organization.

SENA

Programming Instructor

2022 - 2022

- I taught young, passionate programming enthusiasts in the Python language.
- I guided young students to complete their capstone projects, supporting innovation and disruptive thinking.

Liceo adventista libertad

Programming Instructor

2022 - 2022

- I guided final-year students to complete their programming projects, which were their graduation projects.

Innovacenter SAS

Systems Engineer

2019 - 2021

- I developed an accounting system with inventory and sales management for the organization.
- I led organizational projects in creating websites for other clients.
